Community Care Referral and Authorization (CCRA) is a VA enterprise-wide system used by community care staff to generate referrals and authorizations so that Veterans can receive care in the community, instead of at a VA Medical Center. The CCRA system includes numerous applications and integrations with more than 25 VA enterprise systems.

Amivero

Human-Centered | Data-Driven

Amivero's DocExtractor tears through 150-page security packets in less than 30 seconds—AI-powered, mission-built, and designed to get analysts straight to the signal, bypassing the noise.

ARETUM

From the submission to case closure, we show how FedRequest leverages AI and FOIA user experience best practices to improve and assist with case and document processing, semantic search, correspondence, information redaction, publication of responsive records, report generation, summarization, and more!

IBM's agentic AI solution, which has significantly accelerated data processing and content authoring by autonomously analyzing datasets and documents, extracting key insights, and generating high-quality reports with minimal human intervention. Built on a modular design, this scalable and adaptable solution ensures seamless integration across enterprise systems.

Summit

**DEMO
LOUNGE**

A supply chain analytics and surveillance product that provides AI-based real-time supply chain monitoring, simulation, risk assessment and predictive analysis.

DevSecCXOps enhances the modern software development lifecycle by integrating the customer throughout the process. NuAI takes this further by automating the customer experience (CX) element at scale. Developed by NuAxis Innovations, NuAI is an AI-powered tool that improves website navigation, enhances user experience, and ensures alignment with CX best practices.

Leveraging AI to enhance border security, this use case enables intra-agency interoperability by integrating real-time sponsor risk scoring for unaccompanied children across DHS, and HHS systems. By cross-referencing intake data with trafficking intelligence the solution identifies high-risk sponsors at the point of apprehension—mitigating exploitation risks and reinforcing the inter-agency coordination goals outlined in EO 13167. This AI-powered capability equips frontline personnel with actionable intelligence to disrupt trafficking networks before vulnerable children enter the placement pipeline.

The Agentic AI Marketplace is a foundational platform designed to accelerate your AI strategy. Serving as your AI control center, it seamlessly routes the right AI agent and model for every task, simplifying enterprise adoption.
